Energy Efficiency in Water Supply and Sanitation Utilities

Program description and covered topics

High energy costs often contribute to unsustainable operating costs that directly affect the financial health of water supply and sanitation utilities and affordability of their services.

This Program supports participating utility companies in collecting, auditing and analyzing data related to their energy use and developing investment programs based on that data to support the reduction of energy costs and increase energy efficiency. The Program also assists in securing the financial resources to match the investments needs for energy efficiency.

The Program has been developed in cooperation with the Technical Partner Econoler and will be delivered by national or regional Hubs in local language. The duration of the Program is one year and it consists of workshops as well as hands-on exercises at the utilities themselves with support of the Trainers. Participating utilities will pay a registration fee which will be communicated by the Hub.

Learning goals

- How to carry out an energy audit?
- How to develop an investment plan to address energy issues?
- How to find resources needed to carry out energy efficiency investments?

Next steps

- Establish Hubs February 2017
- Training of the Trainers March 2017
- Launch of Program April/May 2017

Hubs

- Aquasan Network in Bosnia and Herzegovina
- Association for Water Preservation and Protection in the South of Serbia
- Bulgarian Water Association
- Wastewater Works Association of Kosovo /
- Water Supply and Sewerage Association of Albania
