WATER DAYS
NIŠ, 2017

8th - 9th June, 2017 • Čair Hall

Invitation

International Fair

Water Supply and Sewage Equipment

International Conference

"Energy Efficiency in Waterworks Systems"

Organizers:

Association for water protection and preservation in the South of Serbia

Medivest KT d.o.o.
Dear Madam/Sir,

We would like to inform You about the reasons for initiating the idea concerning preparation and organization of International Professional Manifestation Water Days, on 08\textsuperscript{th} and 09\textsuperscript{th} of June 2017 in Niš, by the Association for water protection and preservation in the South of Serbia (WASS).

The Association for water protection and preservation in the South of Serbia is a professional association gathering 25 waterworks in the South of Serbia, with the aim to engage all Public Utility Companies (from the sector of water supply, waste water collection and treatment, and similar activities) Universities, Schools and other educational institutions, nongovernmental organizations, industrial subjects and other representatives of the interested professionals with the intention to promote protection and preservation of the water resources and environment in the South of Serbia through mutual activities.

Water production as well as water distribution along with the sector for waste water collection represents the most important segments of utility services. The need for constant increase of the capacities for delivering services is in direct connection with the application of modern technical-technological solutions and knowledge. Having in mind the fact that Association for water protection and preservation in the South of Serbia is dealing with the problems concerning water supply and waste water collection, including the fact that this service is being delivered to million inhabitants in the South of Serbia, it is necessary to emphasize that improvement of these services is based on sustainable and regional development.

In the region from Belgrade to Sofia, there were no opportunities until now to inform professionals in a direct, professional and organized manner, about new technological achievements and their application, in the sector of utility services.

These are some of the main reasons for Association for water protection and preservation in the South of Serbia decided to organize International Professional Manifestation Water Days, on 08\textsuperscript{th} and 09\textsuperscript{th} of June 2017 in Niš. The event is devided in two parts. The first part is Water Fair, a chance for companies that perform business activities in the sector of water supply equipment production, waste water collection, treatment, flood protection and erosions, devices, apparatus and instruments producers
for water and waste water quality control, to present themselves. Comparative advantages offered by this manifestation present the chance for business performance promotion, realization of the good commercial results, but they can also be important as a communicational connection between business subjects, institutions and individuals.

The second part of the "Water days" manifestation will be International professional conference on the subject "Energy efficiency in waterworks systems" where many domestic and relevant institutions and organizations from abroad will take part. This conference is supported by many international institutions, and by engaging professional and national associations there will be representatives from 10 South East European countries.

Energy efficiency in the water systems is an important topic, not presented enough in this part of Europe and it is completely in accordance with the needs for introducing energy efficiency measures foreseen by the EU regulations. This topic is also important concerning the optimization of the business performance of the companies dealing with the water supply and waste water collection.

We are kindly asking You to give support, in accordance with Your possibilities, in preparation and organization of the International Professional Manifestation Water Days in Niš, and thus create possibility for successful realization of this project that will directly represent our relation towards water, water systems and energy efficiency, but also represent the City of Niš, South of Serbia as well Republic of Serbia in the best possible manner.

Our opinion is that this kind of event is an opportunity to present to the international and domestic public all ideas, solutions and knowledge applicable in functioning of the water systems, possessed by the organization or institution You represent. With this aim we are offering the possibility to have presentation and exposure from Your range of activities that would be part of the International Professional Conference "Energy efficiency in water systems".

Respectfully,

PhD Miloš Djordjević
WASS President
